## **GREEN DIAMOND RESOURCE COMPANY RELEASES FIRST SUSTAINABILITY REPORT**

Report highlights the family-owned company's long-term commitment to sustainable forest management across its timberlands

**Seattle, Wash.** – Green Diamond Resource Company, the Seattle-based forest landowner and manager with roots back to 1890, today released its first Sustainability Report. The report offers a look into its 2.2 million acres of working forests, natural climate solutions, dedicated employees, and community engagement.

“As a company, we continue to take a long view of forest management. We have made significant strides in forest land conservation. Conserving working forests for future generations is a win-win for global biodiversity and local economies,” said Douglas Reed, President of Green Diamond Resource Company. “Last year, we conducted a sustainability materiality assessment, compiled high-quality metrics and explored the role our timberlands play in addressing a changing climate, all of which align with our guiding principles.”

Green Diamond's 2022 Sustainability Report highlights include:

- 1.5 million acres managed under federal state fish and wildlife conservation agreements
- More than 751,000 acres are in active listed carbon projects
- 93% of employees reporting satisfaction with Green Diamond as a place to work
- Reduction of recordable injury rate by 1.5% and our lost time rate by .4%
- Sponsorship of the Women's Forest Congress
- Six years of the Opportunity Internship and Scholarship program

Today, 100% of the land owned and managed by Green Diamond is certified by the voluntary, world-leading Sustainable Forest Initiative® (SFI) or Forest Stewardship Council® (FSC®). The rigorous standards shape the company's approach to providing essential forest products while helping advance sustainability through best practices and collaboration.

"When we work together, we benefit rural communities and support critical habitats that are home to countless species of wildlife, fish and plants," Reed said. "We actively engage with partners to inform our practices on the landscape, like working with the Peregrine Fund on the recovery of the critically endangered California Condor. We've been a stewardship partner for over 100 years and we know we can't do this alone, and we wouldn't want to. We drive better results when we foster strong relationships and partnerships with tribes, conservation groups, small-forest landowners and others across our operating areas."

The full report and additional information on Green Diamond's sustainability efforts can be read online [here](#).

*Green Diamond Resource Company is a privately held forest products company with roots dating back to 1890. Today, the company owns working forest lands in Washington, Oregon, Montana and California. A subsidiary, Green Diamond Management Company, provides forest management services in the U.S. South and West. All lands owned and managed by Green Diamond are independently audited and certified for sustainable forest management. More information about Green Diamond's environmental leadership may be found at [www.greendiamond.com](http://www.greendiamond.com).*
